Aukusitino “A.J.” Ah-Yek was recently named the first recipient of the newly created Sigma Scholarship, awarded by the Clark College Mathematics Department to support and encourage students who are traditionally underrepresented in STEM fields to pursue higher-level mathematics. “Thanks to generous donations from many of you in our college community, we are awarding AJ \$1500 to go towards his future education,” wrote mathematics professor Kayoko Barnhill in an email to college employees today.

Ah-Yek enrolled at Clark College as a Running Start student, initially undecided about his degree path. Soon after finishing his pre-calculus courses, he became a math tutor and eventually an engineering and writing tutor. Throughout his time at Clark, he has played in the college’s Jazz Band and also participated in engineering competitions at the college. After graduating this spring with his Associate in Science – Transfer Track 2 degree, he plans to transfer to WSU Pullman to major in mechanical engineering and minor in mathematics. His career focus is in Aerospace Engineering.

“On behalf of the Tutoring Services Team, I would like to let the scholarship committee know that they definitely got the right candidate when they picked A.J. for this,” wrote Tutoring Services Program Manager Janice Taylor. “A.J. is not only an academic rising star, but he is also a rock star in Tutoring Services! He is not afraid to set high goals and he will achieve every single one of them in the shortest time possible. AJ has been an invaluable member of our team and a great resource for his fellow peers at Clark College, we are

excited and sad to see him head off to Pullman.”
